METODOLOŠKA OBJAŠNJENJA

Izvori i metode prikupljanja podataka

Podaci o stanovništvu i domaćinstvima prikupljaju se popisima svakih deset godina prema jedinstvenoj metodologiji na cjelokupnom području Bosne i Hercegovine.

DEFINICIJE

Podaci iz popisa

U Popisu 2013. godine po prvi put je za utvrđivanje ukupnog broja stanovništva primijenjen koncept „uobičajenog stanovništva“. Po ovom konceptu osoba se smatra stanovnikom onog mjesta u kojem sama (u slučaju samačkog kućanstva) ili s članovima svog kućanstva provodi najveći dio svog vremena, odnosno dnevni odmor, neovisno od toga gdje ima prijavljeno prebivalište. Time su u ukupno stanovništvo određenog mjesta uključene osobe koje su u tom mjestu živjele neprekidno najmanje godinu dana prije kritičnog trenutka Popisa, kao i osobe koje su u tom trenutku živjele kraće od 12 mjeseci s namjerom da u tom mjestu ostanu najmanje godinu dana.

Kućanstvom se smatra svaka obiteljska ili druga zajednica osoba (višečlano kućanstvo), tj. skupina od dvije ili više osoba koje zajedno zauzimaju cijelu stambenu jedinicu ili njen dio i osiguravaju sebi hranu, a moguće i ostale potrepštine za život. Članovi ove skupine mogu udruživati svoje prihode u manjoj ili većoj mjeri. Kućanstvom se smatra i svaka osoba koja živi sama („samačko kućanstvo“), tj. osoba koja živi sama u posebnoj stambenoj jedinici ili koja zauzima, kao stanar, posebnu sobu (ili sobe) u nekoj stambenoj jedinici, ali ni s jednim stanarom te stambene jedinice zajednički ne čini dio višečlanog kućanstva.

Podaci prema starosti iskazuju se prema navršenim godinama života. Svaka skupina starosti obuhvata osobe koje su navršile godine života unutar granica intervala. Tako su npr. u skupini 10-14 godina obuhvaćene osobe koje imaju 10 i više godina, ali još nisu navršile 15 godina života.

Podaci o stanovništvu prema zakonskom bračnom statusu su prikupljeni na temelju izjave osoba o njihovom formalno-pravnom bračnom statusu. U Popisu 2013. godine prvi put su prikupljeni i podaci o osobama koje žive u neformalnoj zajednici.

NOTES ON METHODOLOGY

Sources and methods of data collection

The data on population and households have been collected by Census every ten years and by unified methodology on all areas of B&H.

DEFINITIONS

The data of the population census

In the 2013 Census, the concept of “usual residents” was applied for the first time in order to determine the total number of population. Under this concept, a person shall be considered as a resident of the place at which s/ he alone (in the case of a oneperson household) or with members of her/his household spends most of time, that is, daily rest, irrespective of where the person's place of residence is registered. Therefore, the total population of a certain place includes persons who lived in that place for a continuous period of at least one year prior to the Census Critical Moment, and persons who at that particular moment lived there less than 12 months but intend to stay at that place for at least one year.

A household shall be any family or other group of persons (“multi-person household”), that is, a group of two or more persons who combine to occupy the whole or a part of a housing unit and to provide themselves with food and possibly other essentials for living. A household shall also be any person who lives alone (“one-person household”), that is, a person who lives alone in a separate housing unit or who occupies, as a lodger, a separate room (or rooms) in a housing unit, but does not join with any of the other occupants of that housing unit to form a part of a multi-person household.

Data by age are expressed by completed years of age. Each age group includes persons who turned the years put as the limits of one interval. For example, the age group of 10-14 years includes all persons who have reached 10 years and more, but have not yet turned 15.

Population data concerning the legal marital status were obtained based on the persons' statements on their formal marital status.

Prema formalno-pravnom kriteriju, stanovništvo staro 15 i više godina je razvrstano prema bračnom statusu u četiri kategorije: nikad oženjen/udata, oženjen/udata, razveden/razvedena i udovac/udovica.

Nikad oženjen/udatim se smatraju sve osobe koje nikad nisu sklopile brak prema važećim zakonskim propisima.

Oženjenim/udatim se smatraju osobe koje su zaključile brak prema važećim zakonskim propisima i svaki brak upisan u matičnu knjigu vjenčanih. Ukoliko je osoba brak sklopila samo u crkvi ili džamiji, ne smatra se oženjenom/udatom.

Razvedenim se smatraju osobe čiji je brak razveden pravosnažnom presudom nadležnog suda.

Udovcima/udovicama se smatraju osobe čija je bračna zajednica prestala smrću jednog od supružnika, odnosno proglašenjem nestalog bračnog supružnika umrlim.

Vitalna statistika

Živorodenim se djetetom smatra svako dijete koje prilikom rođenja diše i pokazuje druge znakove života, kao što su kucanje srca, pulsiranje pupčane vrpce i nesumnjivo kretanje voljnih mišića. Ako dijete ubrzo nakon poroda umre, najprije se registrira kao živorođeno, a zatim kao umrlo dojenče.

Od 2001. godine prema preporukama Skupštine Svjetske zdravstvene organizacije i Međunarodnog udruženja ginekologa (FIGO) **mrtvorodenim** se smatra dijete rođeno, odnosno izvađeno iz tijela majke bez ikakvih znakova života, tj. ako nije disalo niti pokazivalo neki drugi znak života, a nošeno je duže od 22 tjedna (približno 6 mjeseci) i koje ima porođajnu težinu 500 gr i više. Izbacivanje mrtvog ploda koji je nošen manje od 22 tjedna, smatra se pobačajem (abortusom), bez obzira na to da li je riječ o prirodnom ili namjernom prekidu trudnoće, i ne registrira se u matičnim knjigama, niti su ti podaci iskazani u ukupnom broju mrtvorodenih.

U statistici umrlih jedinica promatranja je svaka umrla osoba.

Umrli je svaka živorođena osoba kod koje je nastupio trajni prestanak svih vitalnih funkcija koje započinju rođenjem bez mogućnosti ponovnog oživljavanja. Ovdje nisu uključeni mrtvorodeni.

Umrlo dojenčadi smatraju se djeca koja su umrla prije navršene prve godine života.

According to formal criteria, population aged 15 and over have been grouped by marital status into four categories: never married, married, divorced and widower/widow.

Never married refers to persons who have never entered into marriage under the applicable legal regulations.

Married refers to persons who entered into marriage under the applicable legal regulations and any marriage entered into the register of marriages. If a person got married in a church or mosque only, such person shall not be considered to be married.

Divorced refers to persons whose marriage has been divorced by a binding judgement of a court having jurisdiction thereof.

Widower/Widow refers to persons whose marriage ended by the death of one of the spouses, that is, by declaring a missing spouse dead.

Vital statistics

Live birth is the complete expulsion or extraction from its mother of a product of conception, which, after such separation, breaths or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movements of voluntary muscles. If a product of such a births dies, it is first registered as live-born and then as died.

As of 2001 following the recommendations of the World Health Assembly and the International Federation of Gynecology and Obstetrics (FIGO), a stillborn child is considered a child born or taken out from mother's body who exhibits no signs of life (not breathing, not moving, no heartbeat) where pregnancy has lasted more than 22 weeks (approximately 6 lunar months) and weight at childbirth has been 500 gr. or more. Expulsion of a dead fetus carried less than 22 weeks considered a miscarriage (abortion), irrespective of whether natural or artificial. These cases are not registered in population registers, nor shown in the tables on stillborn.

In statistics of deaths the unit of observation is every deceased person.

A dead person is every live-born person in which there is a permanent disappearance of all evidence of life at any time after live birth has taken place, without capability of resuscitation. Stillbirths are not included here.

Dead infants are considered children who died under one year of age.

U statistici sklopljenih brakova jedinica promatranja je svaki zakonito sklopljen brak, a kod statistike razvoda brakova svaki brak koji je pravosnažnom presudom nadležnog suda razveden, poništen odnosno proglašen nevažećim.

Red rođenja djeteta Za određivanje reda rođenja uzimaju se u obzir sva djeca koju je majka rodila, uključujući dakle, i mrtvorodenu djecu, bez obzira da li su rođena u braku ili izvan braka.

Stručna pomoć kod rođenja je pomoć doktora medicine ili diplomirane babice. Da bi se dobio ukupan broj rođenih sa stručnom pomoći, treba zbrojiti rođene u zdravstvenoj ustanovi i rođene "na drugom mjestu" sa stručnom pomoći.

Mjesto i utvrđivanje smrti Po ovom obilježju razvrstane su umrle osobe, prema tome da li je smrt nastupila u zdravstvenoj ustanovi ili na drugom mjestu (u stanu, polju, itd). Ako je smrt nastupila u zdravstvenoj ustanovi, ujedno se smatra da je smrt utvrdio ljekar, a ako je smrt nastupila izvan zdravstvene ustanove, onda se umrli razvrstavaju još i prema tome da li je smrt utvrdio ljekar ili neka druga osoba.

Migracija predstavlja prostornu pokretljivost stanovništva.

Migrant je osoba koja sudjeluje u procesu prostorne pokretljivosti stanovništva (doseljenik, odseljenik).

Unutarnja migracija predstavlja preseljenje osoba unutar teritorija Bosne i Hercegovine, prateći pri tom mjesto iz kojeg je osoba odjavila prebivalište, kao i mjesto novog prebivališta.

Prebivalište je općina ili distrikt u kojem se državljanin nastani s namjerom da tamo stalno živi (Sl.glasnik BiH broj 32/01; član 3. tačka 7).

Starost migranta predstavlja se kao broj navršenih godina života u trenutku njegovog preseljenja. Svaka starosna kohorta obuhvata osobe koje su navršile godine života u granicama intervala.

Postupak izrade osnovnih demografskih pokazatelja

Opća stopa nataliteta predstavlja odnos između broja živorođenih i procijenjenog broja stanovnika, računato na 1000 stanovnika.

Opća stopa mortaliteta predstavlja odnos između broja umrlih i procijenjenog broja stanovnika, računato na 1000 stanovnika.

Opća stopa prirodnog priraštaja predstavlja razliku između stope nataliteta i stope mortaliteta za godinu promatranja.

In statistics of marriages the unit of observation is every marriage that is recognised by law. In statistics of divorces the unit of observation is every marriage that is dissolved or cancelled by a valid decision of the municipal court in charge.

Birth order In establishing birth order all children are taken into account (live births and stillbirths), irrespective of whether born in or out of wedlock.

Medical assistance at birth is the assistance by a medical doctor or a qualified midwife. The total data of live births with medical assistance includes the number of children born in medical facility and those born in "in some other place" but with medical assistance.

Place of death and establishing of death By this characteristic, the deceased person are classified in consideration of whether the person died in health institution or some other place (house, field, etc). If the place of death is health institution it is considered that death is established by a physician. If place of death is some other place then are dead persons classified by whether of death was established by physician or some other person.

Migration represents spatial mobility of population.

Migrant is a person which participates in the process of spatial mobility of population.

Internal migration is relocation of persons within the territory of Bosnia and Herzegovina, thus considering the place of deregistration as well as new place of residence.

The municipality or district in which a citizen is placed with the purpose of permanent living is considered as a permanent residence. (The Official Gazette of B&H, No 32/01, article 3, point 7).

Age of migrants is presented as an age reached at the moment of migration. Each age group includes persons who reached the age within limits of an interval.

Procedure of making basic demographic indicators

General natality rate is the ratio between the number of live-born children and the estimated number of inhabitants per 1000 population.

General mortality rate is the ratio between a number of dead and an estimated number of inhabitants per 1000 population.

General rate of natural increase is the difference between the natality and mortality rates in a given year.

Stopa smrtnosti dojenčadi predstavlja odnos između broja umrle dojenčadi i broja živorođenih iste godine, računato na 1000 živorođenih.
