## **Metodološka objašnjenja**

Podaci o proizvodnji, prodaji i zalihama šumskih sortimenata, obrađeni u ovom saopštenju, urađeni su na temelju rezultata obrade entitetskih zavoda za statistiku iz redovitog mjesečnog istraživanja. Mjesečne izvještaje podnose sva poduzeća koja se bave stalnom proizvodnjom šumskih sortimenata iz šuma u državnoj svojini, bez obzira da li im je iskorištavanje šuma temeljna ili sporedna djelatnost.

Stoga je podacima obuhvaćena samo proizvodnja, prodaja i zalihe šumskih sortimenata iz državnih šuma, dok šumski sortimenti proizvedeni u šumama na koje postoji pravo svojine nisu uključeni.

Podaci se daju na temelju izvršenog premjera šumskih sortimenata. Iskazane količine predstavljaju neto drvenu masu sortimenata izraženu u zapremninskim metrima.

Industrijsko drvo je ono drvo koje ima povoljna fizička i kemijska svojstva za daljnju industrijsku upotrebu i preradu. Industrijsko drvo razvrstava se u dvije grupe: industrijsko drvo za mehaničku preradu (trupci, drvo za ploče i sl.) i industrijsko drvo za kemijsku preradu (celulozno drvo, drvo za suhu destilaciju i sl.).

Tehničko drvo namijenjeno je za razne tehničke svrhe (rudničko drvo, stupovi za elektro i telefonske vodove i sl.), te njegova fizička i kemijska svojstva upravo odgovaraju toj namjeni.

Ogrijevno drvo je namijenjeno neposredno za ogrijev ili za proizvodnju drvenog uglja.

### **Notes on methodology**

*Data on production, sale and stock of forest products presented here has been prepared on the basis of data provided by entity statistical offices underlying the regular monthly survey results. Monthly reports are provided by all the companies performing their business activities in the forestry sector and permanently producing forest products.*

*To this end, data presented here covers only production, sale and stock of forest products manufactured out of the resources from the state-owned forest. Accordingly, forest products manufactured out of the resources from privately-owned forests were covered here.*

*Data is provided on the basis of measured volume of wood products. The given quantities represent net volume of wood products measured in cubic meters.*

*Industrial wood is defined as wood with good physical and chemical properties for the industrial manufacturing and processing. Industrial wood is divided into two groups: industrial wood for mechanical processing (logs, wood-based panels etc.) and industrial wood for chemical processing (pulpwood, dry distillation wood etc.)*

*Technical wood given its physical and chemical properties has multiple use (mining timber, electric power transmission line posts etc.)*

*Fire wood is used for heating or production of charcoal.*
