BRUTO DOMAĆI PROIZVOD – RASHODNI PRISTUP 2007

Eksperimentalni obračun – prethodni podaci

GROSS DOMESTIC PRODUCT BY EXPENDITURE APPROACH 2007

Experimental compilation – preliminary data

S ciljem unapređenja statistike nacionalnih računa Bosne i Hercegovine, Agencija za statistiku BiH počela je kompilaciju Bruto domaćeg proizvoda prema rashodnom pristupu (BDP). Kao početni, referentni period, za uspostavljanje serije, zasnovane na raspoloživim izvorima podataka, odabrana je 2004. godina. To je prva godina za koju su bili raspoloživi podaci Ankete o potrošnji domaćinstava, čime je osiguran važan izvor podataka o potrošnji domaćinstava. Pored toga, 2004.godina je prva godina u kojoj se raspolagalo podacima o spoljnoj trgovini, koji su kompilirani na bazi carinskih deklaracija, sa obuhvatom za cijelu zemlju.

Kako još uvijek postoje značajne praznine u baznim statistikama raspoloživim za kompilaciju nacionalnih računa, a kvalitet administrativnih izvora podataka ili statističkih istraživanja treba unaprijediti, sačinjene procjene treba smatrati eksperimentalnim procjenama.

Pored toga, treba napomenuti da obzirom na raspoložive izvore podataka i korištene metode, BDP prema rashodnom pristupu, procjenjen je za BiH kao cjelinu.

Bruto domaći proizvod prema rashodnom pristupu, procjenjen je za 2007., godinu u iznosu od 24.161 milion KM, što predstavlja nominalni porast od 14,23% i realni rast od 12,14%, u odnosu na 2006.godinu. Ovo ukazuje na rast cijena od 1,86%.

With a view to improving National Accounts statistics of Bosnia and Herzegovina, Agency for statistics of BiH has started compilation of Gross domestic product by expenditure (GDP). The year 2004 was chosen as the starting reference period for the construction of the series based on available data source. The year 2004 is the first for which data from a household budget survey with countrywide coverage became available thus providing an important data source for estimating consumption of households. That year is also the first for which foreign trade data have been compiled with countrywide coverage based on uniform custom declaration.

Since there are still important gaps on the basic statistics available for the compilation of the national accounts and the quality of some statistics based on administrative sources or statistical survey need improvements, composed estimates should be considered as experimental.

In addition it should be noted that taking available data sources and methods used the figures of GDP by expenditure have been estimated for BiH as whole.

Gross domestic product by expenditure is estimated at 24.161 millions of KM in 2007, and represents a nominal increase of 14,23% and real increase of 12,14% from 2007 to 2006. These figures imply rise in prices of 1,86%.

Izdaci za krajnju potrošnju domaćinstava (81,96% BDP-a) iznosili su u 2007.godini 19.802 miliona KM što predstavlja nominalni rast od 9,62%. Posmatrano u stalnim cijenama, nakon eliminiranja uticaja rasta cijena, potrošnja je porasla za 8,34%. Potrošnja domaćinstava, raščlanjena prema namjeni, pokazuje rast svih kategorija, kako u nominalnim, tako i u realnim vrijednostima.

Izdaci za krajnju potrošnju vlade (18,43% BDP-a) porasli su između 2006. i 2007. za 9,86% nominalno i opali za 0,08% u stalnim cijenama.

Bruto investicije u stalna sredstva (26,42% BDP-a) su porasle između 2006. i 2007. za 34,18% nominalno i 27,5% realno. Kao posljedica porasta investicija, povećano je i učešće ove kategorije u ukupnom BDP-u sa 22,49% u 2006. na 26,42% u 2007. Analiza bruto investicija prema vrsti pokazuje rast, za sve vrste stalnih sredstava.

Izvoz roba i usluga u 2007. u odnosu na 2006. zabilježio je rast od 13,61% u nominalnim i 9,43% u realnim vrijednostima.

Istovremeno, **uvoz roba i usluga** porastao je za 17,9% nominalno i 11,4% realno.

Household consumption expenditure (81,96 % of GDP) reached the amount of 19.802 millions of KM in 2007, and represents a nominal growth rate of 9,62%. At constant prices, after discounting the effect of price changes, consumption increased 8,34%. A breakdown of household consumption expenditure by purposes shows increases in all categories, in nominal as well as real terms.

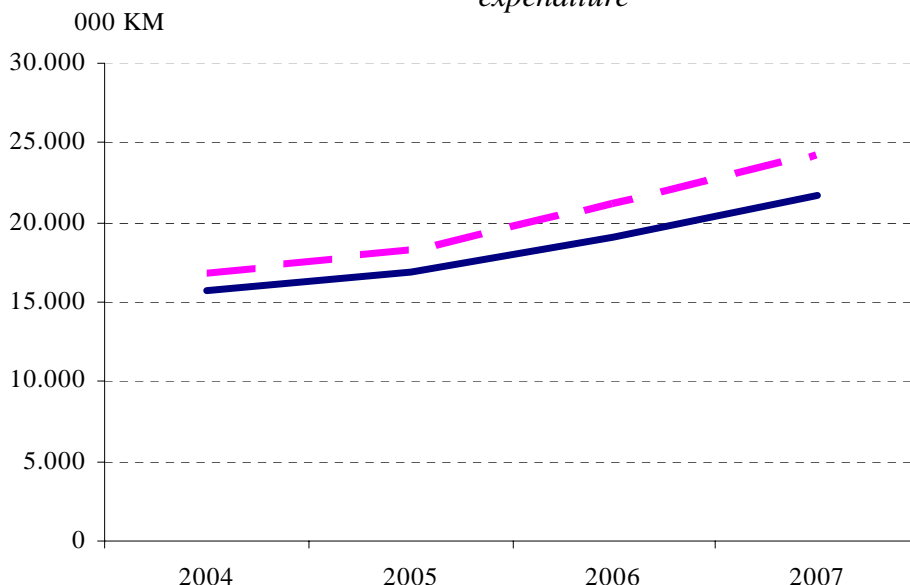

General government consumption expenditure (18,43% of GDP) grew between 2006 and 2007 by 9,86% in nominal terms and decreased 0,08% in constant prices.

Gross fixed capital formation (26,42% of GDP) increased between 2006 and 2007 by 34,18% in nominal terms and 27,5% in real terms. As consequence of investment increase the share of this category in GDP increased from 22,49% in 2006 to 26,42% in 2007. The breakdown of gross fixed capital formation by type of assets shows increases in all type of assets.

Exports of goods and services in 2007 in comparison to 2006 registered an increase by 13,61% in nominal and 9,43% in real terms.

At the same time *imports of goods and services* increased by 17,9% in nominal terms and 11,4% in real terms.

METODOLOŠKA OBJAŠNJENJA

Bruto domaći proizvod (BDP) prema rashodnom pristupu definiira se kao ukupna domaća krajnja potrošnja korigirana spoljnom bilancom roba i usluga sa ostatkom svijeta. Osnovne komponente BDP-a po rashodnom pristupu su:

- Izdaci za krajnju potrošnju domaćinstava,
- Izdaci za krajnju potrošnju neprofitnih institucija koje usluge pružaju domaćinstvima,
- Izdaci za krajnju potrošnju vlade,
- Bruto investicije,
- Izvoz i uvoz roba i usluga.

Izdaci za krajnju potrošnju domaćinstava sastoje se od izdataka rezidentnih domaćinstava na potrošnju roba i usluga za direktno zadovoljenje ljudskih potreba i želja.

Izdaci za krajnju potrošnju neprofitnih institucija koje usluge pružaju domaćinstvima se sastoje od roba i usluga koje neprofitne institucije pružaju domaćinstvima bez naknade ili u cijenama koje nisu ekonomski značajne.

Izdaci za krajnju potrošnju vlade obuhvata dvije kategorije izdataka: Izdatke za individualnu potrošnju i Izdatke za kolektivnu potrošnju. Izdaci za individualnu potrošnju vlade sastoje se od isplata za netržišne usluge vlade (obrazovanje, zdravlje, socijalnu skrb, kulturu, sport i td.) i izdataka za tržišne proizvode i usluge (lijekove, ortopedska pomagala, usluge lječilišta i td.) direktno dostavljenih domaćinstvima kao socijalni transfer u naturi.

Izdaci za kolektivnu potrošnju vlade uglavnom se sastoje od izdataka za administrativne, odbrambene, ekonomske, razvojno-istraživačke i druge ne-tržišne usluge vlade.

Bruto investicije se sastoje od bruto investicija u stalna sredstva, promjena na zalihama i neto sticanja dragocjenosti. Bruto investicije u stalna sredstva sastoje se od investicija u nova stalna sredstva, troškova transakcija za postojeća stalna sredstva i nabave neproizvedene aktive. Promjene zaliha odnose se na zalihe proizvodnje u toku, zaliha gotovih proizvoda, zaliha trgovačke robe i zaliha sirovina i materijala.

Podaci o **izvozu i uvozu** roba i usluga temelje se na bilanci plaćanja Centralne banke Bosne i Hercegovine. Vrijednost izvezeno robe obračunava se po paritetu fob, a vrijednost uvezene robe po paritetu cif.

NOTES ON METHODOLOGY

Gross domestic product (GDP) by expenditure approach is defined as total domestic final consumption corrected by external trade balance with the rest of the world. The main components of GDP by expenditure are:

- Household final consumption expenditure,
- Final consumption of non-profit institutions serving households,
- Final consumption of general government,
- Gross capital formation,
- Export and import of goods and services.

Household final consumption expenditure consists of expenditure incurred by resident households on consumption goods and services for the direct satisfaction of human needs and wants.

Final consumption expenditure of non-profit institutions serving households consist of goods and services which non-profit institutions provide to households free or at prices that are not economically significant.

Final consumption of general government includes two categories of expenditure: Individual government consumption expenditure and Collective government consumption expenditure. **Individual government consumption expenditure** comprises payment for non-market government services (education, health, social care, culture, sport, etc.) and market goods and services (pharmaceutical and therapeutic products, health resort services) supplied directly to households as social transfer in kind. **Collective government consumption expenditure** consists of expenditure on administrative, defense, economic, R&D and other non market government services.

Gross capital formation is composed of gross fixed capital formation, changes in stocks and acquisition less disposals of valuables. Gross fixed capital formation consists of investments into new fixed capital formation, costs of transactions of existing fixed assets and additions to the value of non-produced assets. Changes in stocks refer to changes of work-in-progress, changes of finished goods, changes of goods in stores and of raw material.

Import and export of goods and services are based on the balance of payments data taken over from Central bank of Bosnia and Herzegovina. The export value of goods is calculated by fob, while import value of goods is calculated by cif.

Procjene u stalnim cijenama

Procjena BDP-a, rashodni pristup, za 2007. godinu je obračunata u cijenama 2006. što omogućava poređenje podataka između dvije godine na kvantitativnoj osnovi (nakon eliminiranja efekta promjena u cijenama). Implicitni deflatori agregata i njihovih komponenti su Paasche-ove vrste što znači da oni ne odražavaju samo promjene u cijenama nego i u sastavu rashoda za godine koje se porede.

Izdaci za krajnju potrošnju domaćinstava u stalnim cijenama izračunati su korištenjem raščlanjenih indeksa potrošačkih cijena.

Izdaci za krajnju potrošnju neprofitnih institucija koje usluge pružaju domaćinstvima u stalnim cijenama dobiveni su korištenjem indeksa potrošačkih cijena i indeksa zaposlenih.

Izdaci za krajnju potrošnju vlade u stalnim cijenama obračunati su deflacioniranjem nabavljenih roba i usluga općim indeksom potrošačkih cijena i indeksom rasta neto plaća.

Bruto investicije u stalna sredstva u stalnim cijenama su dobivene deflacioniranjem tekućih vrijednosti ponderisanim indeksom za glavne trgovinske partnere za pojedine robe. Procjene za građevinske radove u stalnim cijenama su dobivene korištenjem implicitnog deflatora outputa u građevinarstvu.

Izvoz roba i usluga u stalnim cijenama je obračunat korištenjem posebno kompiliranim „unit value indexom“, Paasche vrste.

Estimates at constant prices

Estimates of GDP by expenditure for year 2007 were calculated at prices of 2006, thus allowing the comparison of the data between these two years on a quantitative basis (after eliminating the effect of changes in prices) The implicit deflators of the aggregate and its component are of Paasche type, which implies that they reflect not only changes in prices but also changes in the composition of the expenditures between years compared.

Household final consumption expenditure at constant prices was calculated using disaggregated consumer price indices.

Final consumption expenditure of non-profit institutions serving household at constant prices were obtained using consumer price indices and employment indices.

Government final consumption expenditure at constant prices was calculated deflating purchased goods and services by general consumer price indices and indices of net wages and salaries.

Gross fixed capital formation at constant prices were obtained by deflation of current values by weighted price index of the main trade partners for these capital goods. Estimates for construction assets were deflated using implicit deflator of output of the output of the construction industry.

Export and import of goods and services in constant prices were calculated using specifically compiled unit value indices of a Paasche type.
