METODOLOŠKA OBJAŠNENJA

Izvori i metode prikupljanja

Podaci o proizvodnji voća, maslina i grožđa u Bosni i Hercegovini dobijeni su agregiranjem podataka dobivenih redovnim statističkim istraživanjima u entitetskim zavodima za statistiku i podružnici Agencije za statistiku BiH iz Brčko Distrikta. Pravni subjekti dostavljaju podatke na osnovu knjigovostvene i druge evidencije, dok se za individualna poljoprivredna gazdinstva vrše procjene od strane statističkih procjenitelja po pojedinim općinama.

Definicije

Rodna stabla i čokoti su stabla, odnosno čokoti koji su prema svojoj fiziološkoj zrelosti sposobni da pod normalnim uslovima za vegetaciju zametnu plod, bez obzira da li su u odnosnoj godini rodila ili ne.

Prinos/prirod voća, maslina i grožđa je iskazan kao hambarski prinos/prirod normalne vlažnosti po odbitku svih gubitaka prilikom berbe i transporta.

Prinosi/prirodi po stablu/čokotu obračunati su na rodna stabla, odnosno rodne čokote vinove loze.

NOTES ON METHODOLOGY

Sources and collection methods

Data on production of fruit and grapes in Bosnia and Herzegovina are aggregated from the regular statistical surveys conducted by the entity statistical institutions and branch of Agency for statistics of B&H from Brčko District. Legal entities are submitting data based on book-keeping and other records whereas the municipal statistical estimators are making estimations for the individual agricultural holdings.

Definitions

Trees and vines of bearing age are those trees and vines capable of bearing fruit under standard conditions, regardless of whether or not they bear fruit during reporting year.

Yield of fruit, olives and a grape is shown as the granaries yield of standard humidity after deductions all losses during the harvest and transportation.

Yield per tree or per vine is computed for the bearing trees or bearing vines.
